*First draft, so I was still figuring out how I wanted to organize the code and wanted to focus on getting the structure of the building down with some visuals so there isn't any comments with explanations in the max patch yet for space :(

Work Plan:
To do list:
-have the complete structure/walls done by next class
-start working on the Midi controller code this week hopefully
*I plan on using an editing suite sometime during this week, date tbd, for at least 3 hours & using class time next week to…
-add more furniture (desk or vanity), plants, posters, instruments, mirror to the bedroom
-add window to the bedroom
-add the shower and sink
        -add 'glass' to windows with poly mode
-change color of the world (the purple) OR look into adding a video in the back (floating on a cloud)
-add a music loop with early 2000s music or low fi beats
-figure out a title!
-add comments and project explanation!!

Materials needed:
-Midi controller via James
-the Screen room + use the screen in that room
-my hard drive
-a computer (the one in the room)
-physical posters (replicas of the ones from the Max world)

Questions for peers:
-should I add music either low-fi or nostalgic 'girl-pop' songs (peers say yes)
-should I add a video to the world's background or is it too busy? (peers say; try clouds/sky and see what it looks like)
-suggestions for what else I could add? (peers say a pet so there's signs of life)
